

Dear Customer,

Fira S.p.A. has always been committed to protecting the environment as well as the health its employees, the local community, and end-users of its products. We pursue many objectives, including full compliance with environmental, occupational health and workplace safety legislation.

In reference to the European Regulation pertaining to the registration, evaluation, authorization, and restriction of chemicals (REACH), Fira S.p.A. is a Downstream User (DU) of these chemicals.

The products manufactured and sold by Fira S.p.A. are defined, by the Regulation, as articles that have no intentional release of substances, and therefore are not subject to the registration requirements described in Article 7 of the REACH regulation.

As producers of articles that may contain Substances of Very High Concern (SVHCs) registered in the Candidate List (the updated list may be found at <https://echa.europa.eu/it/candidate-list-table>), we are required to inform our customers if these substances are present in concentrations higher than 0.1% w/w.

Based on the data obtained from our supply chain and according to Article 33 of the REACH regulation, we declare that our products, in some of their components, contain Lead (CAS 7439 92 1) with a concentration > 0.1% w/w.

We are working to abide with the requirements concerning SSCIP notifications for the product classes that contain SVHCs, and we will promptly give the notification numbers issued by European Chemicals Agency (ECHA) to our customers, in the appropriate time and manner.

Fira S.p.A.
